

Cod: 6697

## Static refrigerated display case 700x700x470h mm

### Description

These refrigerated display cabinets are designed for bar furnishings. Their depth of 700 mm makes them particularly suitable for insertion in very narrow counters. The tubs are made of Aisi 304 stainless steel internal and external monocoque, insulated with ecological low-density polyurethane, with electric panel positioned under the body and stainless steel top as standard. The superstructures are in silver anodised aluminium as standard with rear closures and base profiles that protrude 3 mm from the body, with LED lights as standard and front glass that can be opened where required. They have static refrigeration with r134a valve system, simple pause defrosting. Display in stainless steel bottom tank. Operating temperature +4/+8°C. Control via electronic control unit. Evaporator tube outlet and condensation water drainage on right side as standard.

### Dimensions

Dimensioni esterne	700x700x470 mm
