

Cod: 7372

ABS cocktail drink station built-in basin 840x550x340 h mm

Description

Drink station complete with 5 fruit trays and lids, dividers. The built-in bowl serves to organise, with very little expense, an efficient bar counter in every situation: all you need is a hole to fit it in! Durable and convenient for efficient work, practical and capacious for maximum output. With a capacity of over 15 kg of ice between crushed and cracked, it guarantees a long working autonomy thanks both to the large quantity of ice it can hold and to the drainage system (connectable to pipes) that allows excess water to drain away. Inside, the tub is divided into sectors by removable panels; a larger one to separate the ice cubes from the crushed ice and three smaller ones that create spaces for storing all the fruit juices and premixes (3 and 6 bottle capacity) needed for work. Included in the tub are: 5 rigid plastic trays with lids for fruit toppings (all of the same size to completely cover the available compartment), removable and resealable for storage in the fridge at the end of service; 2 juice bottle separators; 1 ice-cube-crushed ice separator; 1 ice-water separator; 1 drain with gasket.
