

Cod: 1898

Gas Oven - Wood 9 Pizzas

Description

This is a wood-gas oven with a double front door, the wood combustion is separate from the baking surface and contains an ash collection tray. It is heated by an ecological burner, which works with methane or propane-butane. The cooking temperature of the dome is controlled by a digital thermometer. The burner output can be changed by an electronic modulator within the limits of 5 to 100 per cent. The power supply is 230 Volt/50-60 Herz. Hourly output of pizzas: 135.
