Stainless steel cabinet table depth 600 mm 1400x600 mm

Description

The stainless steel cabinet table of Ristoattrezzature's Sottocosto Line has a sturdy 430 stainless steel structure and measures 140x60x85h cm: it is designed to have 2 sliding doors on one side and removable doors, a top (40 mm high) reinforced with a water-repellent AISI 304 stainless steel bilaminated chipboard panel and square tube legs. Professional cabinet tables are functional work furniture with a top and sliding doors on one side to close compartments for storing professional equipment or kitchen utensils and convenient storage compartments for packaged food that does not need to be stored in a refrigerated environment. Excellent for use in pastry or bakery workshops, pizzerias, restaurants, butcher's shops, hotels and all those establishments where specific hygiene procedures must be complied with in accordance with the law. For this reason, the work surface is made of AISI 304 stainless steel, the most suitable material to come into contact with foodstuffs, and the structure is made of 430 stainless steel; the height of these units is 85 cm and they are equipped with feet that can be adjusted and extended by +/- 5 cm; furthermore, it is possible to purchase together with the cabinet table, as an additional option, a kit complete with 4 swivel castors (2 with brake and 2 without brake) to make cleaning and sanitising operations easier in the environments in which they are positioned. Standard equipment: nr 1 intermediate shelf. Stainless steel, why is it used in the kitchen? There

are two fundamental aspects to remember when deciding to purchase stainless steel products to fit out a professional kitchen or workshop: Hygiene: for those involved in professional catering, hygiene is certainly one of the most important factors to consider. In this case, stainless steel is certainly an essential ally that cannot be renounced. Bakeries, pastry shops, pizzerias, bars and restaurants must have surfaces that are resistant to chemicals, wear and tear and easy to clean. Resistance and Durability: Stainless steel is a metal alloy with extraordinary properties in terms of resistance. The material has a massive amount of chromium, we are talking about a presence of between 11 and 30%. This composition prevents stainless steel from rusting and corroding when subjected to continuous exposure to water and air. Chromium, in fact, oxidises with oxygen to form chromium oxide, which adheres to the stainless steel product to be made, preventing further oxidation and, therefore, the much hated appearance of rust.
