

Cod: 8682

Digital hot water dispenser capacity 2.2 l 2.6 Kw

Description

The wait before the water starts to boil always seems like an eternity. Thanks to the hot water dispenser you now have an immediate source of hot, boiling water. You can easily vary the temperature between 45 °C and 100 °C and the amount of water from 100 to 300 ml. Ideal for a cup of tea, but also for instant soups or coffee, baby bottles or blanching vegetables. Large water tank with filter The water tank of the hot water dispenser has a large capacity of 2.2 litres, so you do not have to refill it after each use. The tank is also removable for easy refilling. When water is poured into the tank, it is immediately filtered through the built-in filter. In this way, all chlorine and small particles that can adversely affect the taste of your tea or coffee will be removed. We recommend changing the filter every six months to ensure the best results. Always at the optimum temperature The digital LED display makes it easy to select one of seven water temperatures, from room temperature to boiling. This way, you can choose the optimal temperature at which to drink. This is especially convenient for tea lovers, as the delicate white and green teas require a different water temperature than black tea or rooibos. For small and large cups. There is no need to use a special cup size for the hot water dispenser, as you can adjust the volume to the desired cup. Select 100, 200, 300 ml or a continuous flow on the digital display and the dispenser will dispense that given amount of water. There is also a lock function

on the digital display that you must press before drawing water. This is a safety measure when small children are present. The hot water dispenser is easy to clean. The drip tray collects all drips and can be easily emptied. It is recommended to descale the hot water tap regularly with a descaling agent suitable for household appliances to keep the filter and dispenser in good condition.

NB: Non-professional equipment.
