

Cod: 8684

3+3 litre capacity double stainless steel electric fryer

Description

The fryer is perfect for frying several products at the same time, or if you have a large family! The double containers offer a total capacity of no less than six litres. In addition, both can be used individually and you can set different temperatures or use only one fryer at a time. Practical double design The fryer has a large capacity of 2 x 3 litres, making it perfect, for example, for preparing chips and snacks at the same time. Since the oil is separated in both containers, it will stay fresh for longer. A further advantage is that the containers are connected, making them even safer and requiring only one power socket. The fryer has an output of 2 x 1800 watts. Easy to use The fryer is easy to use. Both containers have individual thermostats that can be set up to 190° C with a knob. Since you can choose a different temperature for the two containers, you can prepare several dishes at the same time or use only one of the fryers. To store the fryer after use, you can easily close the handle without it touching the oil. A space is available for storing the cable. Cold zone The fryer is equipped with a cold zone. This means that there is a space under the heating element where the oil becomes less hot. All crumbs, e.g. from snacks or chips fall downwards, but do not burn, thanks to the cold zone. In this way, the oil will remain usable for longer and the frying will be healthier. Practical to use The fryer guarantees maximum safety, thanks to protection against overheating, and stability, thanks to non-slip feet. In addition, the fryer is easy to dismantle and quick to clean. In addition, the individual components can be washed in the dishwasher. The enamelled inner container is durable and easy to use.

NB: Non-professional equipment.

Dimensions

Dimensioni esterne	350x380x240 mm
--------------------	----------------

Technical data

Capacità	6 Lt
Peso	6 kg
