

Cod: 8686

Electric kitchen scale with digital display capacity 5 kg division 1 g

Description

A kitchen scale is an essential element for your kitchen. Not only does this scale weigh all ingredients with 1 gram accuracy, it also has a built-in kitchen timer and shows the room temperature. Extra convenient if you like to cook and want to take into account the effect a warm room has on your dough. Hygienic stainless steel The mixing bowl has a capacity of 2.5 litres and is made of stainless steel, which is not only aesthetically pleasing but also easy to clean. You can use any other bowl you prefer with this kitchen scale, as it has a practical tare function with which you can reset the weight. This is also great if you want to add ingredients later. Digital display with kitchen timer The backlit display shows not only the weight in grams, but also the temperature of the room in which it is located. As a result, you will always know the room temperature in your kitchen, which is essential information if you like to work with doughs that require a particular temperature. In addition, the display functions as a kitchen timer, which warns you when the time you have set has elapsed.

NB: Non-professional equipment.
