

Cod: 8799

Cold juice extractor from fruit and vegetables 150W

Description

The Tristar extractor presses the ingredients with 55 rotations per minute, practically without generating heat and preventing oxidation of the juice. This preserves all the valuable nutrients and vitamins and allows the juice to be kept unopened, without losing any of the nutrients. Moreover, the juice extraction is very efficient, so you get the most out of your ingredients. You can use fruit and vegetables of any consistency, without even peeling them! The extractor is also very practical to use. The compact size ensures that the extractor does not take up too much space on the kitchen countertop. It has a 'reverse' function that allows you to reverse the direction of the extractor if something gets stuck. Juice cannot drip from the extractor when the anti-drip system is active. The separate container for pulp and juice can be used separately to allow you to pour the juice directly into a glass. Thus, preparing delicious and healthy juice will not cost you any effort! The Tristar extractor not only gives you the healthiest and freshest juices, it is also very easy to use. The non-slip feet ensure that the extractor remains stable on the kitchen worktop. The safety mechanism ensures that the extractor only works when all parts are assembled correctly. The extractor is easy to disassemble and thus easy to clean. In addition, all removable parts are dishwasher-safe so cleaning the extractor is child's play!

NB: Non-professional equipment.

Dimensions
