Benchtop electric grill 10.8 kW 80x90x25h cm

Description

Stainless steel frame. Heat-resistant thermosetting plastic knobs with useful screen-printed edges. Heating by means of heating elements with AISI 304 sheathing, which operate in air and are suitable for the temperatures to which they are exposed (400°C). The thermal load of the heating elements allows heat exchange only towards the food for improved cooking and energy saving. Safety thermostat with automatic reset to protect the heating elements. Energy regulator that adjusts the ON-OFF operating frequency of the heating elements. The maximum continuous operation position is useful in the cleaning process, as it induces pyrolysis of fats on the heating elements. AISI 304 cold-pressed water tank with drain hole. The water improves the quality of cooked food and transports cooking fat to the drain. Water filling and topping-up tap located on the front panel. Tank drain located on the front panel and lever-operated. Moulded AISI 304 stainless steel worktop, 2 mm thick, with rounded edges for easy cleaning. Front, side and back panels in stainless steel. Worktop finished with laser cut for "head-to-toe" coupling and fixing with edging.

Dimensions

Dimensioni esterne	800x900x250 mm
