

Cod: 3270073

Stainless steel table on legs with bottom surface depth 700 mm 1800x700 mm

Description

Fountain dispensers Fountain dispensers are cold water dispensers mounted inside a tall cabinet to allow bottles and glasses to be easily filled through the tap. The frame is made of stainless steel, with two adjustable water dispensing taps. The dispenser is single, high enough to place cups, glasses and bottles underneath to be filled. Fountain dispenser: how it works Fountain dispensers are equipped with a spout and swan neck tap. Water flows through the cabinet, which is chilled internally with a ventilated refrigeration system and a thermostat to regulate the temperature of the cold water. Cold water dispensers can be placed on walls and are very useful in hotels, bars, bed & breakfasts and hotel facilities for dispensing water. Customers can thus directly obtain fresh water at any time of the day. Fountain dispenser on Ristoattrezzature All fountain dispensers for sale on Ristoattrezzature are CE-marked.
