Description

Popcorn Machines

Who doesn't love popcorn? Children's parties, birthdays, village parties, catered events: on any of these occasions, the popcorn machine is a perfect pastime for munching on a savoury snack while having fun.

How to cook popcorn

The popcorn machine consists of a frame with transparent glass walls and a saucepan at the base made of stainless steel, on which the dry corn is placed. As it heats up, the corn pops and forms the cute popcorn, which is salted before serving. Butter can also be added to flavour the freshly made popcorn.

There are different buttons on the popcorn machine to switch on the interior lights, the machine,

the stirring arm and the heating pot.

Popcorn machine cleaning

In addition to the various features described above, the popcorn machine has a seed catcher that makes cleaning easier and collects all burnt or unpopped kernels. This makes it easier to proceed with cleaning, removing excess oil and residues with dishwashing liquid and a non-abrasive cloth.

Pop Machines on Ristoattrezzature

All popcorn machines in our catalogue are CE-marked.
