Cold room height 2540 mm price excluding motor 2940x3340x2540h mm

Description

Coffee Grinder-Dispenser

Freshly ground coffee has a whole new flavour. For this reason, the coffee grinder is an indispensable element to offer fresh and tasty coffee to your customers, in bars, breakfast rooms, cafeterias and restaurants, guaranteeing a unique aroma and a distinctive taste experience.

The coffee machine consists of a tank with different capacities depending on the model, up to 3.2 kg, and an internal blade set that grinds the coffee into coffee powder for use in coffee machines.

The power supply is either single-phase or three-phase, depending on the model. Models with three-phase power supply have multiple speed sets to finely grind the coffee beans.

Some machines have an automatic stop that makes the mechanism stop as soon as the doser is full. It is also possible to select one of several positioning levels inside the machine.

Coffee Grinder Material

The grinder's structure is made of aluminium or hardened steel, with plastic tanks compatible with food contact according to current regulations.

Coffee Grinder on Ristoattrezzature

All coffee grinders in our catalogue are CE-marked.
