

Cod: 1286

Semi-automatic electric bread crusher

Description

A breadstick moulding machine for forming breadsticks, which is carried out continuously by a pair of moulding rollers available with different interchangeable diameters. The length of the breadsticks is adjusted with a timer located on the control panel. Once the desired size is reached, the machine stops. Cutting is done manually by pressing a control and can be done directly on the outfeed belt or on special trays to be inserted into the machine. The width of the cutting rollers is 15 cm. Production is from 8 to 24 breadsticks at a time depending on the diameter of the rollers. The machine is supplied with one pair of rollers of your choice, the others on request. There is a storage compartment in the machine trolley. It is mounted on swivel wheels. The loading hopper has free rollers made of Teflon and can be closed to reduce bulk.

Dimensions

Dimensioni esterne	330x1650x1500 mm
