

Cod: 1287

Automatic Electric Grinder

Description

Breadstick shaping machine for continuous shaping of breadsticks by a pair of moulding rollers with different interchangeable diameters. The length of the breadsticks is adjusted with a timer located on the control panel. When the desired size is reached, the machine stops and cutting is automatically carried out, after which another cycle begins. The machine will continue until the operator presses the stop button. The width of the forming rollers is 15 cm. Production is from 8 to 24 breadsticks at a time depending on the diameter of the rollers. The machine is supplied with one pair of rollers of your choice, the others on request. There is a storage compartment in the machine trolley. It is mounted on swivel wheels. The loading hopper has free Teflon rollers and can be closed to reduce space requirements. Roller dimensions in mm 5-6, 5-8, 10-13-17.

Dimensions
